Hello

I am a web programmer from Russia currently located in Batumi, Republic of Georgia. I am eager to find the employment or contract job outside Russian Federation. I am interested in both remote work and relocation opportunities.

Looking through the list of the requirements and skills you expect from the applicants I see that entirely suit for your needs. I can start to work on the project immediately and be engaged in the work on it as mush as it is needed to meet your expectations.

My tech stack is Backend development on PHP with the use of Yii and Yii2 framework, Laravel. Other key PHP frameworks (Symfony is also possible but with some introductory period 1-2 weeks).

Frontend development is on the traditional basis: HTML, CSS, JS with jQuery and Bootstrap framework. Recently extensively use Vue.js.

Regards, Denis Tsybulia
